***Allowable Subject Matter***

Claims 12-15 and 17 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method for preventive protection of vehicle occupants in dangerous situations and a system for carrying out the protection method. Each independent claim identifies the uniquely distinct features "determining a distance of the vehicle to objects on a roadside on an ongoing basis according to size; determining whether the distance is less than a critical distance; initiating protective measures as a function of the determination; determining a host vehicle velocity by magnitude; determining the critical distance as a function of the determined host vehicle velocity; and if the determined distance again exceeds the critical distance, canceling the initiated protective measures again" and "determining a distance of the vehicle to objects on a roadside on an ongoing basis according to size; determining whether the distance is less than a critical distance; initiating protective measures as a function of the determination; determining a host vehicle velocity by magnitude; and determining the critical distance as a function of the determined host vehicle velocity, wherein the critical distance is determined in such a way that below a predefined host vehicle velocity, the critical distance is zero, and above a predefined distance, the critical distance is independent of the host vehicle velocity, and between the two values, a relationship between the host vehicle velocity and the critical distance runs in a substantially linear fashion, according to a predefined function". The cited prior art fail to anticipate or render the above limitation obvious.
